EDUCATION

University of California, San Diego

Expected June 2027

B.S. Computer Engineering

La Jolla, CA

Relevant Coursework: Computer Vision, Machine Learning, Advanced Data Structures, Algorithms, ARM Assembly, Object Oriented Programming, Signals and Systems, Linear Algebra, Engineering Probability and Statistics, Discrete Mathematics

EXPERIENCE

AutomaticGPT

April 2026 – Present

Full Stack Engineer Intern

San Diego, CA

- Built the platform's agentic workflow layer, connecting React interfaces, backend APIs, AI bot routing, multi-step input collection, and run persistence to automate complex user workflows end-to-end
- Developed multi-step AI automation flows that coordinate frontend state, backend services, prompt generation, and bot execution, enabling users to complete complex content and business workflows through guided interactions
- Integrated reusable backend APIs and frontend controllers for bots, multi-bot workflows, teams, subscriptions, and user data, improving platform scalability and feature delivery across core product areas

Triton Droids

April 2026 – Present

Embedded Systems Team Member

La Jolla, CA

- Built MiniAloha's mobile-base and elevator control interface by developing a Python/Tkinter controller for ST3215 serial-bus servos, enabling keyboard-driven testing of translation, rotation, lift, and emergency stop commands
- Enabled SO-101 leader-follower arm bring-up by configuring LeRobot calibration, port discovery, and teleoperation workflows for two Feetech-based arms, reducing setup friction for repeatable hardware and simulation testing
- Supported Tactile Hands prototyping by contributing to the low-cost robotic-hand pipeline using ESP32-S3, force-sensing resistors, and ROS 2 interfaces for calibrated fingertip-force feedback and safer grasp testing

Inovasi Daya Solusi

July 2025 – Sep 2025

Quality Assurance Intern

Jakarta, Indonesia

- Improved API reliability by testing 50+ REST endpoints, identifying and resolving pre-release defects across services
- Enhanced backend security by conducting input-validation testing, uncovering SQL injection risks and verifying sanitization
- Reduced API response time by 25% by analyzing latency and optimizing database queries with indexing

PROJECTS

Career Copilot | *Next.js, React, TypeScript, Tailwind CSS, Prisma, PostgreSQL, Clerk, Gemini API, Zod* | [GitHub](#)

- Built an AI-powered resume tailoring platform that improved application customization by parsing PDF/DOCX resumes, extracting job-posting requirements, and generating structured resume-to-role match analyses
- Enforced Zod-validated outputs to improve reliability of skill-gap analysis, keyword matching, and AI-generated application materials
- Streamlined the job application workflow by creating a secure full-stack workspace with Clerk authentication, Prisma/PostgreSQL persistence, usage tracking, and PDF export for tailored resume artifacts

NoteX | *Next.js, HTML, Tailwind CSS, Python/Flask, MySQL* | [GitHub](#)

- Built a full-stack note-sharing platform that improved content accessibility by enabling secure creation, storage, and sharing of notes via REST APIs
- Implemented JWT authentication and password-protected notes, allowing users to manage private content through authenticated sessions
- Integrated a rich text editor and real-time search functionality for formatted note authoring and content discovery

TECHNICAL SKILLS

Languages: C++, C, Java, Python, JavaScript, TypeScript, MATLAB, LaTeX, SQL

Frameworks/Libraries: React, Next.js, Node.js, Express.js, Flask, Tailwind CSS, Prisma, SQLAlchemy, AI SDK

Tools: ROS 2, PostgreSQL, MySQL, Supabase, Git, Docker, REST APIs, Stripe, Auth0, Vite, Jest, Jira
